The mxfsPEEDRAIL Xpress offers you the ultimate level of flexibility for your production environment. The Xpress is designed to increase your production workflow performance, ensuring interoperability between platforms and breaking every incompatibility barrier through the production chain.

FULLY FEATURED TOOLSET FOR EVERY STEP OF THE PRODUCTION WORKFLOW

Integrating all the mxfsPEEDRAIL centralized ingest solution capabilities, the Xpress works as a fully featured toolset that includes ingest, capture, playback, file conversion, transcoding, as well as storage capabilities featured on a single and easily configurable platform, with support for all the major broadcast formats.

ALL INGEST SERVICES WRAPPED IN A 24 CM DEEP SYSTEM

With a compact rack unit with only 24 cm depth, the Xpress is a mix'n'match of all the great mxfsPEEDRAIL centralized features, working as an ideal solution for small sized facilities that need all the performance and flexibility with a much smaller size than the normal broadcast equipment. It can be wrapped in a 1RU system with full support for capture, playback, file conversion and transcoding or in a 2RU system, with added support for storage.

With the best down and cross conversion tools in the market, the mxfsPEEDRAIL Xpress enables full control of your centralized ingest system through a unique and intuitive interface.

CONFIGURABLE ACCORDING TO YOUR WORKFLOW NEEDS

You can easily configure your mxfsPEEDRAIL Xpress to your production workflow environment and be able to have all the required features from mxfsPEEDRAIL product-line in one solely unit, with the maximum performance and reliability. Built upon solid technology, the Xpress ensures your contents quality from ingest into delivery.

With a full range of solutions you can easily adapt your Xpress into the growth of your business needs.
