

Get in touch with your software...

...with a wave

Maximise your Apple Color creativity

A mouse or pen and tablet is rarely the fastest or easiest way to use Final Cut Studio Color. Wouldn't it be better if you had something real to get hold of? Well, the Wave panel allows you to do just that.

Affordable Technology

With the Wave, Tangent bring a new level of affordability and quality to control surfaces. The design draws heavily on the experiences gained from our highly successful CP100 and CP200 panel ranges. The Wave is not intended to replace these panels – it just brings professional grading surfaces within the reach of every user.

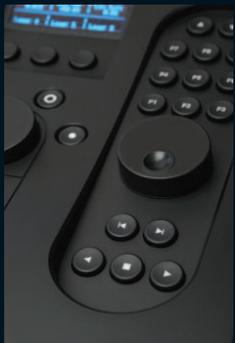

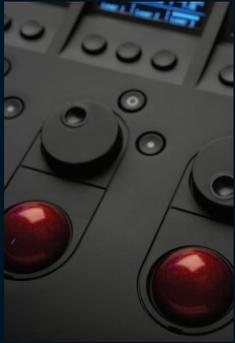

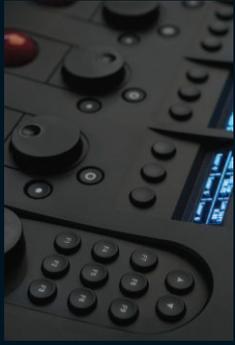

Stylish enough to look great in any grading suite and compact enough to be used for on-set grading, you'll

find all the controls you'd expect from a colour grading panel without compromising on the essential ergonomics. The Wave features crisp, easy to read, cool-blue OLED displays and custom trackball units based on non-contact optical pickup.

Close integration with Color

With enough buttons and knobs to keep your most needed controls at your fingertips, all the controls and can be user configured for both function and sensitivity on a room-by-room basis.

Owning a Wave will increase your productivity, leaving you to get on with what you're best at doing – being creative!

The Wave Control Mapper

Customising Wave couldn't be simpler. The Mapper presents a graphical representation of the Wave panel, just click on a control in the application and assign a parameter or action from Color. For controls that can be assigned to a knob or trackerball you can also set the sensitivity. Alternate parameters, actions and sensitivities can be programmed for activation when the ALT key is held down.

Custom mappings are stored within your home directory. This means that every user automatically has their own mapping.

SPECIFICATIONS

Power:	500mA max (via USB).
Connection:	Fullspeed USB 2.0.
Apple Color version:	v1.5 or later.
Displays:	3 x cool blue OLED displays for parameter status and soft button labels.
Parameter Knobs:	9 x continuous rotation encoders with integral push-button for reset.
